Conditioners that
fight frizz, fading
and damage

Short Story
Cut and color
meet cute

Did you know that hair color continues to oxidize after a color service? That's because rinsing with water does not stop the oxidative action of peroxide. It may also be the reason that many of your clients complain of scalp sensitivity after a service. "The only way to successfully stop oxidation is with the freshly activated form of L-ascorbic acid, which is the active ingredient in Malibu C Crystal Gel," says Nicole Emiliani, color education at Malibu C, who suggests rinsing the color out of your client's hair with water. Then, mix one packet of Crystal Gel with two ounces of warm water in a clean color applicator bottle. Apply Crystal Gel from roots to ends to instantly stop oxidation. ONE TO WATCH

Nick Hemsley joined Lunatic Fringe Salon in Salt Lake City, Utah, in 2011, when he was right out of beauty school. In July NAHA named him Newcomer Stylist of the Year, and for good reason. "My collection expresses organic movement of hair with dramatic bursts of color inspired by the Northern Lights," says Hemsley, who paired simple shapes with hard lines for balance. A graduate of Paul Mitchell the School in Salt Lake City, Hemsley is eager to develop his portfolio of editorial work, and his work behind the chair provides plenty of inspiration. Still, it's his fresh approach to hair styling that makes him so popular with his clients. Sounds like a winning combination to us.

Nick Hemsley

Hydrogen peroxide was discovered in 1818, but it took until 1867 to find out it could bleach hair.
